

Caltrans Storm Water Management Program

Improved Data Quality Through the Use of a Standard Laboratory Deliverable and Data Assessment Software

**Richard Amano
Laboratory Data Consultants, Inc.
Carlsbad, California**

Caltrans Storm Water Management Program

Introduction

Caltrans Storm Water Management Program requires a measure of quality assessment of environmental chemistry analyses on storm waters collected throughout the state.

Two issues

- **Problems with information delivered in electronic data format (EDD)**
 - **Cost and effort involved with manual data review**
-

Caltrans Storm Water Management Program

Data Quality System

- **Laboratory EDD format**
 - **EDD integrity check**
 - **Ability to review lab results relative to project specific criteria**
 - **Automated data review of all environmental analytical methods**
 - **Post assessment standard delivery format**
-

Caltrans Storm Water Management Program

Product

-
- Built on a Microsoft ACCESS platform
 - EDD format specification based on Caltrans Data-Reporting Protocols and additional fields required for data review
 - Three software components
 - EDD Integrity Check Module
 - Project specific library
 - EDD Automated Data Review Module
-

Caltrans Storm Water Management Program

EDD Integrity Check

A laboratory process

- Checks for compliance with Caltrans data reporting protocols
- Checks for information correctly reported for automated data review
- Checks technical consistency between related constituents

Laboratory EDDs error checked and fixed before delivery to client

Caltrans Storm Water Management Program

EDD Integrity Check

- Required fields
- Standard Values
- Data format
- Logical date/time values
- Duplicate records
- Missing QC information
- Correct QC/sample batching
- Technical consistency

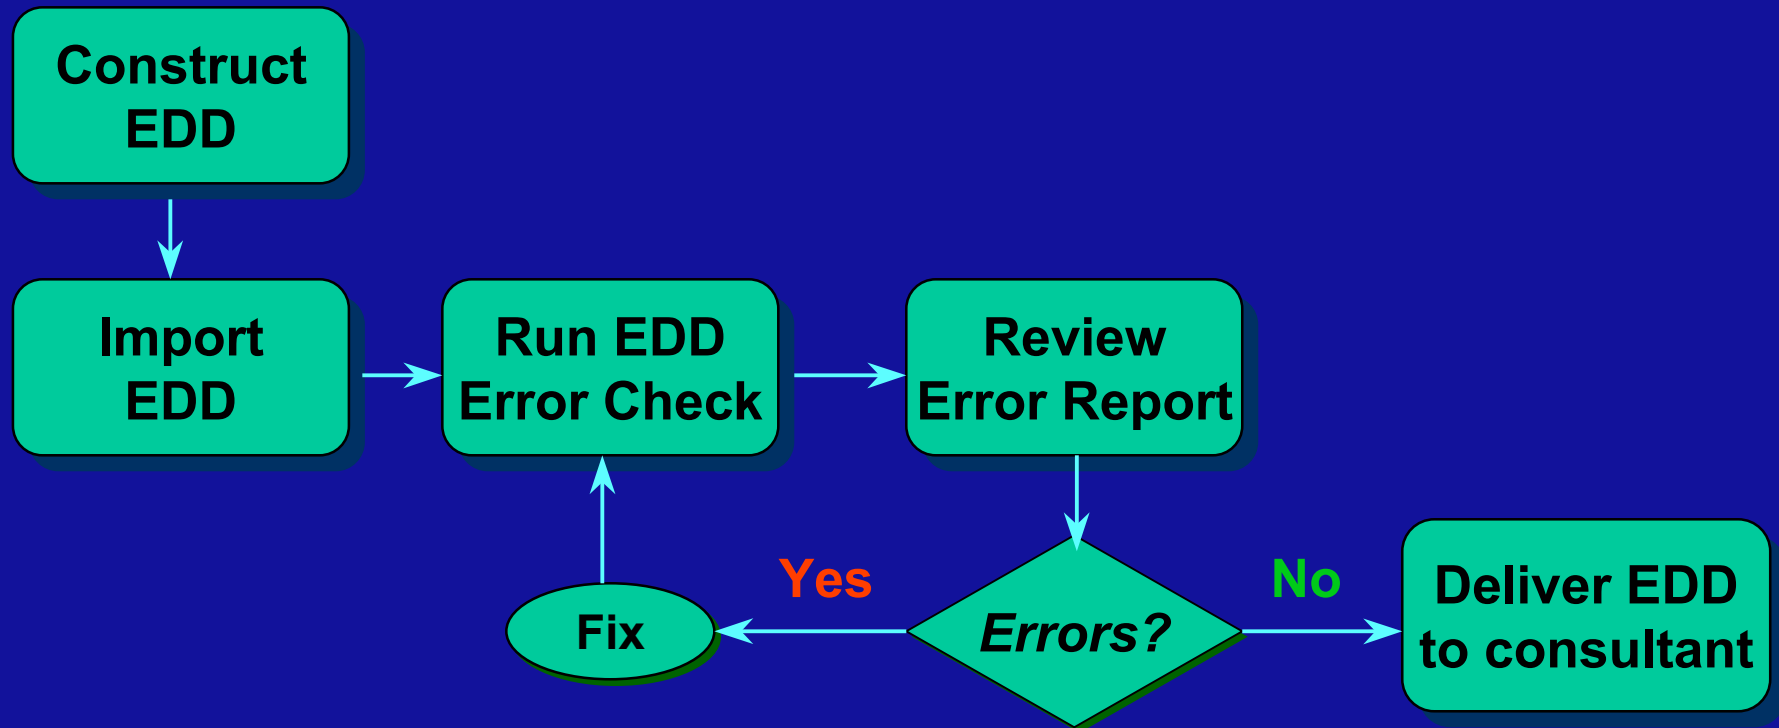

Report describes and locates each error (if applicable)

EDD Integrity Check

Lab Process Flow

Caltrans Storm Water Management Program

Project Specific Library

Provides flexibility to review lab data relative to project requirements

- **Reporting Limits**
- **Units**
- **Accuracy and precision limits**
- **Rejection criteria**
- **Blank contamination rules**
- **Holding Times**

Project water quality objectives serve as template for library

Caltrans Storm Water Management Program

Automated Data Review

A consultant process

- **Quality control results assessed relative to review criteria in a project specific library**
 - **Data review qualifiers applied to each constituent result when associated quality control results fail criteria specified in project library**
 - **Compares constituent results against historical ranges**
-

Caltrans Storm Water Management Program

Automated Data Review

Data review elements

- Holding times
 - Reporting limits
 - Method blank contamination
 - Laboratory control samples
 - Matrix spike/spike duplicates
 - Laboratory duplicates
 - Surrogates (organic methods)
 - Field QC
 - Field blank contamination
 - Field duplicates
-

Caltrans Storm Water Management Program

Automated Data Review

Post review assessment

- **Validation reports summarize data review findings for each sample and constituent reported on that sample**
 - **Quality control outlier reports summarize quality control problems and list all associated samples**
-

Caltrans Storm Water Management Program

Automated Data Review

Post assessment EDD submittal

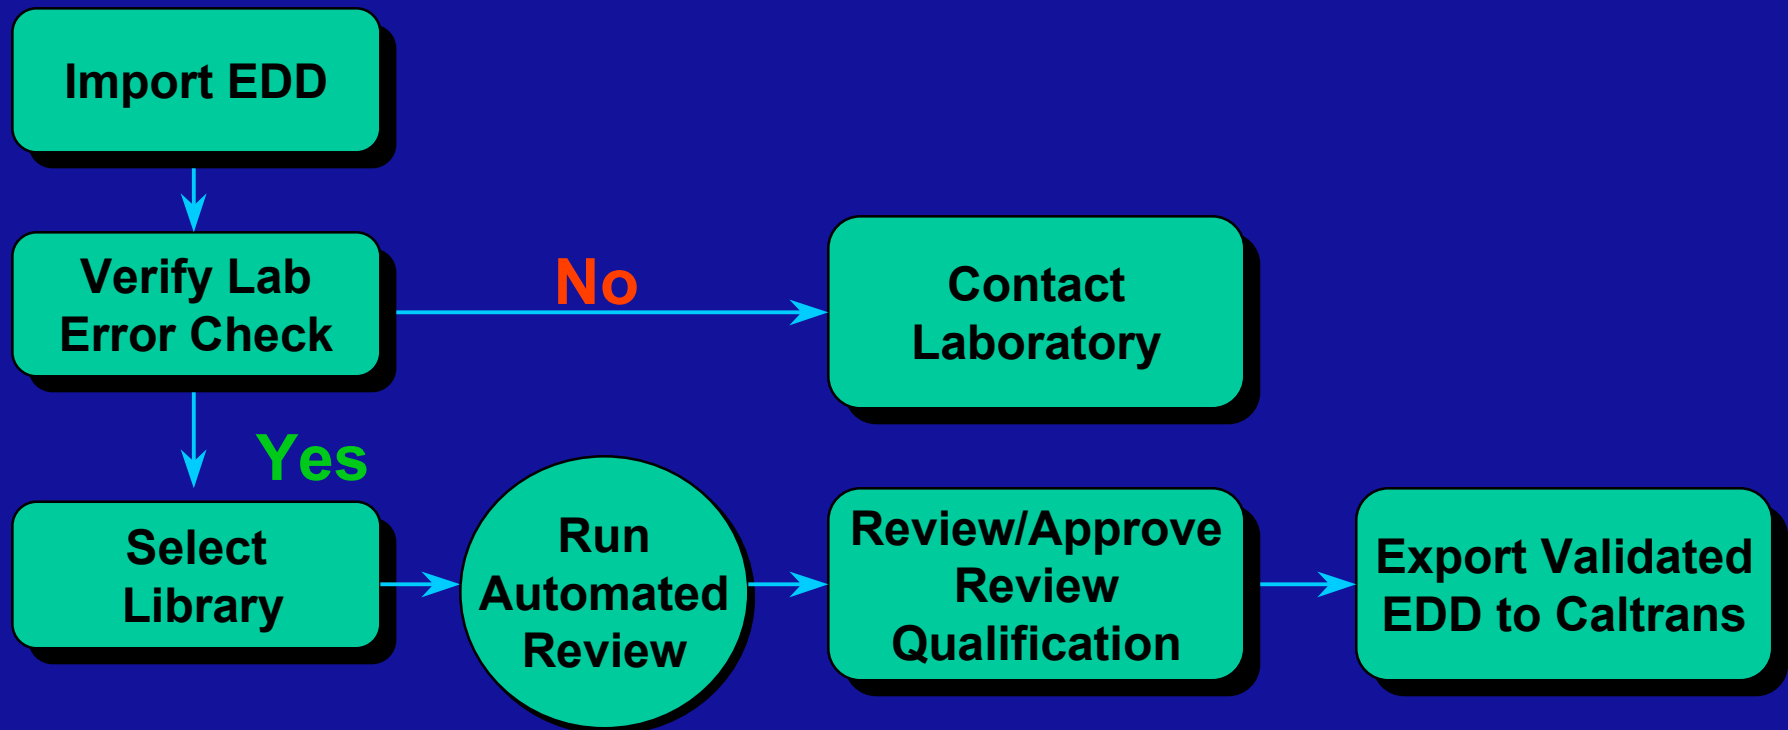

- **Add sample description information not included in EDD submitted by lab**
 - **Export reviewed EDD for delivery to Caltrans in format specified by Caltrans**
 - **Export utility also offers custom format option**
-

Caltrans Storm Water Management Program

Overview

Caltrans Storm Water Management Program

Summary

- EDD data format consistent between data collectors
 - Assures quality lab EDDs
 - 100% data review for all laboratory analytical results
 - Reduced labor time and cost
-
